4/30/98 Description of 75-90cm looks fine.
D1 is 23mm thick in right log and unmarked
with lots of horizontal Dh and some D1.
Center 3/4 of m1gC is deformed by
horizontal intrusion right
below sand bed. →
There are 2 laminae below
deformed zone. Last 25
above the U99. AMS stem
must be reworked.
